

**Family:** *Verbenaceae*

**Taxon:** *Clerodendrum wallichii*

**Synonym:** *Clerodendrum nutans* Wall. ex D. Don

**Common Name:** chui mo li

| 401                    | Produces spines, thorns or burrs  |                           | y=1, n=0   | n                            |
| 402                    | Allelopathic  |                           | y=1, n=0   |                              |
| 403                    | Parasitic   |                           | y=1, n=0   | n                            |
| 404                    | Unpalatable to grazing animals  |                           | y=1, n=-1  |                              |
| 405                    | Toxic to animals  |                           | y=1, n=0   |                              |
| 406                    | Host for recognized pests and pathogens   |                           | y=1, n=0   |                              |
| 407                    | Causes allergies or is otherwise toxic to humans  |                           | y=1, n=0   | n                            |
| 408                    | Creates a fire hazard in natural ecosystems   |                           | y=1, n=0   | n                            |
| 409                    | Is a shade tolerant plant at some stage of its life cycle   |                           | y=1, n=0   |                              |
| 410                    | Tolerates a wide range of soil conditions (or limestone conditions if not a volcanic island)  |                           | y=1, n=0   | y                            |
| 411                    | Climbing or smothering growth habit   |                           | y=1, n=0   | n                            |

|     |  |  |   |
|-----|--|--|---|
| 412 | Forms dense thickets   | y=1, n=0                                       |   |
| 501 | Aquatic  | y=5, n=0                                       | n |
| 502 | Grass  | y=1, n=0                                       | n |
| 503 | Nitrogen fixing woody plant  | y=1, n=0                                       | n |
| 504 | Geophyte (herbaceous with underground storage organs -- bulbs, corms, or tubers)               | y=1, n=0                                       | n |
| 601 | Evidence of substantial reproductive failure in native habitat                                 | y=1, n=0                                       | n |
| 602 | Produces viable seed   | y=1, n=-1                                      | y |
| 603 | Hybridizes naturally   | y=1, n=-1                                      |   |
| 604 | Self-compatible or apomictic   | y=1, n=-1                                      |   |
| 605 | Requires specialist pollinators  | y=-1, n=0                                      | n |
| 606 | Reproduction by vegetative fragmentation   | y=1, n=-1                                      |   |
| 607 | Minimum generative time (years)  | 1 year = 1, 2 or 3 years = 0,<br>4+ years = -1 |   |
| 701 | Propagules likely to be dispersed unintentionally (plants growing in heavily trafficked areas) | y=1, n=-1                                      | n |
| 702 | Propagules dispersed intentionally by people   | y=1, n=-1                                      | y |
| 703 | Propagules likely to disperse as a produce contaminant   | y=1, n=-1                                      | n |
| 704 | Propagules adapted to wind dispersal   | y=1, n=-1                                      | n |
| 705 | Propagules water dispersed   | y=1, n=-1                                      |   |
| 706 | Propagules bird dispersed  | y=1, n=-1                                      | y |
| 707 | Propagules dispersed by other animals (externally)   | y=1, n=-1                                      | n |
| 708 | Propagules survive passage through the gut   | y=1, n=-1                                      | y |
| 801 | Prolific seed production (>1000/m2)  | y=1, n=-1                                      |   |
| 802 | Evidence that a persistent propagule bank is formed (>1 yr)                                    | y=1, n=-1                                      |   |
| 803 | Well controlled by herbicides  | y=-1, n=1                                      |   |
| 804 | Tolerates, or benefits from, mutilation, cultivation, or fire                                  | y=1, n=-1                                      |   |
| 805 | Effective natural enemies present locally (e.g. introduced biocontrol agents)                  | y=-1, n=1                                      |   |
