

Family: Poaceae

Taxon: *Sporobolus pyramidatus*

Synonym: *Agrostis pyramidata* Lam. (basionym)

Common Name: whorled dropseed

Sporobolus argutus (Nees) Kunth

Vilfa arguta Nees

Questionnaire :	current 20090513	Assessor:	Patti Clifford	Designation: H(HPWRA)
Status:	Assessor Approved	Data Entry Person:	Patti Clifford	WRA Score 14
101	Is the species highly domesticated?		y=-3, n=0	n
102	Has the species become naturalized where grown?		y=1, n=-1	
103	Does the species have weedy races?		y=1, n=-1	
201	Species suited to tropical or subtropical climate(s) - If island is primarily wet habitat, then substitute "wet tropical" for "tropical or subtropical"		(0-low; 1-intermediate; 2-high) (See Appendix 2)	High
202	Quality of climate match data		(0-low; 1-intermediate; 2-high) (See Appendix 2)	High
203	Broad climate suitability (environmental versatility)		y=1, n=0	
204	Native or naturalized in regions with tropical or subtropical climates		y=1, n=0	y
205	Does the species have a history of repeated introductions outside its natural range?		y=-2, ?=-1, n=0	n
301	Naturalized beyond native range		y = 1*multiplier (see Appendix 2), n= question 205	y
302	Garden/amenity/disturbance weed		n=0, y = 1*multiplier (see Appendix 2)	n
303	Agricultural/forestry/horticultural weed		n=0, y = 2*multiplier (see Appendix 2)	n
304	Environmental weed		n=0, y = 2*multiplier (see Appendix 2)	n
305	Congeneric weed		n=0, y = 1*multiplier (see Appendix 2)	y
401	Produces spines, thorns or burrs		y=1, n=0	n
402	Allelopathic		y=1, n=0	
403	Parasitic		y=1, n=0	n
404	Unpalatable to grazing animals		y=1, n=-1	n
405	Toxic to animals		y=1, n=0	n
406	Host for recognized pests and pathogens		y=1, n=0	
407	Causes allergies or is otherwise toxic to humans		y=1, n=0	n
408	Creates a fire hazard in natural ecosystems		y=1, n=0	
409	Is a shade tolerant plant at some stage of its life cycle		y=1, n=0	
410	Tolerates a wide range of soil conditions (or limestone conditions if not a volcanic island)		y=1, n=0	y

411	Climbing or smothering growth habit	y=1, n=0	n
412	Forms dense thickets	y=1, n=0	n
501	Aquatic	y=5, n=0	n
502	Grass	y=1, n=0	y
503	Nitrogen fixing woody plant	y=1, n=0	n
504	Geophyte (herbaceous with underground storage organs -- bulbs, corms, or tubers)	y=1, n=0	n
601	Evidence of substantial reproductive failure in native habitat	y=1, n=0	n
602	Produces viable seed	y=1, n=-1	y
603	Hybridizes naturally	y=1, n=-1	
604	Self-compatible or apomictic	y=1, n=-1	
605	Requires specialist pollinators	y=-1, n=0	n
606	Reproduction by vegetative fragmentation	y=1, n=-1	
607	Minimum generative time (years)	1 year = 1, 2 or 3 years = 0, 1 4+ years = -1	
701	Propagules likely to be dispersed unintentionally (plants growing in heavily trafficked areas)	y=1, n=-1	y
702	Propagules dispersed intentionally by people	y=1, n=-1	
703	Propagules likely to disperse as a produce contaminant	y=1, n=-1	y
704	Propagules adapted to wind dispersal	y=1, n=-1	n
705	Propagules water dispersed	y=1, n=-1	y
706	Propagules bird dispersed	y=1, n=-1	
707	Propagules dispersed by other animals (externally)	y=1, n=-1	y
708	Propagules survive passage through the gut	y=1, n=-1	y
801	Prolific seed production (>1000/m2)	y=1, n=-1	y
802	Evidence that a persistent propagule bank is formed (>1 yr)	y=1, n=-1	y
803	Well controlled by herbicides	y=-1, n=1	
804	Tolerates, or benefits from, mutilation, cultivation, or fire	y=1, n=-1	
805	Effective natural enemies present locally (e.g. introduced biocontrol agents)	y=-1, n=1	

Designation: H(HPWRA)

WRA Score **14**

304	2007. Randall, R.. Global Compendium of Weeds. http://www.hear.org/gcw/	No evidence.
305	2001. Walton, C.. Weedy Sporobolus grasses strategy. Natural Resources and Mines, http://www.dpi.qld.gov.au/documents/Biosecurity_EnvironmentalPests/IPA-Weedy-Sporobolus-Strategy.pdf	In Australia the Sporobolus indicus complex are environmental and agricultural weeds. "Weedy sporobolus compete strongly in native grasslands and other natural ecosystems, reducing biodiversity, ecosystem function and conservation values. Management of weedy sporobolus in natural ecosystems is extremely difficult. Farm productivity is also reduced by complete displacement of desirable pasture species by tough unpalatable grasses that increase management costs unless management is altered."
401	2006 (onwards). Clayton, W.D./Harman, K.T./Williamson, H.. Grassbase the online world grass flora. http://www.kew.org/data/grasses-db.html .	No spines, thorns or burrs.
402	1971. Rasmussen, J.A./Rice, E.L.. Allelopathic effects of Sporobolus pyramidatus on vegetational patterning. 86: 309-326.	Rasmussen and Rice (1971) tested the allelopathic effects of Sporobolus pyramidatus' leaf leachate and decayed root material on Cynodon dactylon, Buchloe dactyloides, and Amaranthus palmeri in a laboratory setting. They concluded that S. pyramidatus had allelopathic effects on seed germination for these species. [lab setting not field experiment] The field observations indicated that the decaying roots of Sporobolus pyramidatus may effect recruitment of other species and germination of Sporobolus seed.
