Family: Malvaceae

Print Date: 7/11/2012

Taxon: Thespesia grandiflora

Synonym: Montezuma grandiflora DC.

Maga grandiflora (DC.) Urban Montezuma speciosissima DC. Common Name: Flor de Maga

maga

| Questionaire : Status: | current 20090513 Assessor Approved | Assessor: Data Entry Person: | Chuck Chimera Chuck Chimera | Designation: L WRA Score -4 | |
| 01 Is the spec | es highly domesticated? | , and the second | | y=-3, n=0 | n |
| 02 Has the sp | ecies become naturalized where g | rown? | | y=1, n=-1 | |
| 03 Does the sp | Does the species have weedy races? | | | y=1, n=-1 | |
| | Species suited to tropical or subtropical climate(s) - If island is primarily wet habitat, then substitute "wet tropical" for "tropical or subtropical" | | | (0-low; 1-intermediate; 2-high) (See Appendix 2) | High |
| 02 Quality of | Quality of climate match data | | | (0-low; 1-intermediate; 2-high) (See Appendix 2) | High |
| 03 Broad clim | ate suitability (environmental ver | rsatility) | | y=1, n=0 | n |
| 04 Native or 1 | naturalized in regions with tropica | al or subtropical climates | | y=1, n=0 | y |
| 05 Does the sp | pecies have a history of repeated i | ntroductions outside its nat | ural range? | y=-2, ?=-1, n=0 | y |
| 01 Naturalize | d beyond native range | | | y = 1*multiplier (see Appendix 2), n= question 205 | n |
| 02 Garden/an | nenity/disturbance weed | | | n=0, y = 1*multiplier (see Appendix 2) | n |
| 03 Agricultur | al/forestry/horticultural weed | | | n=0, y = 2*multiplier (see Appendix 2) | n |
| 04 Environmo | ental weed | | | n=0, y = 2*multiplier (see Appendix 2) | n |
| 05 Congeneri | c weed | | | n=0, y = 1*multiplier (see Appendix 2) | y |
| 01 Produces s | pines, thorns or burrs | | | y=1, n=0 | n |
| 02 Allelopath | ic | | | y=1, n=0 | n |
| 03 Parasitic | | | | y=1, n=0 | n |
| 04 Unpalatab | le to grazing animals | | | y=1, n=-1 | |
| 05 Toxic to ar | imals | | | y=1, n=0 | n |
| 06 Host for re | cognized pests and pathogens | | | y=1, n=0 | y |
| 07 Causes alle | ergies or is otherwise toxic to hum | ans | | y=1, n=0 | n |
| 08 Creates a f | ire hazard in natural ecosystems | | | y=1, n=0 | n |
| 09 Is a shade | tolerant plant at some stage of its | life cycle | | y=1, n=0 | y |
| 10 Tolerates a | wide range of soil conditions (or | limestone conditions if not | a volcanic island) | y=1, n=0 | n |

| 411 | Climbing or smothering growth habit | y=1, n=0 | n |
|-----|---|--|----|
| 412 | Forms dense thickets | y=1, n=0 | n |
| 501 | Aquatic | y=5, n=0 | n |
| 502 | Grass | y=1, n=0 | n |
| 503 | Nitrogen fixing woody plant | y=1, n=0 | n |
| 504 | Geophyte (herbaceous with underground storage organs bulbs, corm | s, or tubers) y=1, n=0 | n |
| 601 | Evidence of substantial reproductive failure in native habitat | y=1, n=0 | n |
| 602 | Produces viable seed | y=1, n=-1 | y |
| 603 | Hybridizes naturally | y=1, n=-1 | |
| 604 | Self-compatible or apomictic | y=1, n=-1 | n |
| 605 | Requires specialist pollinators | y=-1, n=0 | |
| 606 | Reproduction by vegetative fragmentation | y=1, n=-1 | n |
| 607 | Minimum generative time (years) | 1 year = 1, 2 or 3 years = 0, 4+ years = -1 | >3 |
| 701 | Propagules likely to be dispersed unintentionally (plants growing in heareas) | avily trafficked y=1, n=-1 | n |
| 702 | Propagules dispersed intentionally by people | y=1, n=-1 | y |
| 703 | Propagules likely to disperse as a produce contaminant | y=1, n=-1 | n |
| 704 | Propagules adapted to wind dispersal | y=1, n=-1 | n |
| 705 | Propagules water dispersed | y=1, n=-1 | n |
| 706 | Propagules bird dispersed | y=1, n=-1 | y |
| 707 | Propagules dispersed by other animals (externally) | y=1, n=-1 | n |
| 708 | Propagules survive passage through the gut | y=1, n=-1 | y |
| 801 | Prolific seed production (>1000/m2) | y=1, n=-1 | n |
| 802 | Evidence that a persistent propagule bank is formed (>1 yr) | y=1, n=-1 | n |
| 803 | Well controlled by herbicides | y=-1, n=1 | |
| 804 | Tolerates, or benefits from, mutilation, cultivation, or fire | y=1, n=-1 | n |
| 805 | Effective natural enemies present locally (e.g. introduced biocontrol ag | ents) y=-1, n=1 | |

| 205 | 1989. Francis, J.K Thespesia grandiflora (DC.) Urban, maga Res. Note SO-ITF-SM-21.: .USDA Forest Service, Southern Forest Experiment Station., New Orleans, LA | "Maga is planted as an ornamental in Florida, Hawaii, Puerto Rico, and several other locations (Little and Wadsworth 1964; Neal 1965)." |
| 301 | 1999. Acevedo-Rodriguez, P./Axelrod, F.S Annotated Checklist for the Tracheophytes of Rı´o Abajo Forest Reserve, Puerto Rico. Caribbean Journal of Science. 35(3-4): 265-285. | "Thespesia grandiflora DC.; endemic, occasional to common, planted and naturalized." [listed as naturalized in Puerto Rico, where it is an endemic species] |
| 301 | | Listed as naturalized in Puerto Rico [where Thesepesia grandiflora is native; otherwise no evidence of naturalization outside native range] |
| 302 | 2007. Randall, R.P Global Compendium of Weeds - Thespesia grandiflora. http://www.hear.org/gcw/species/thespesia_grandiflora/ | No evidence as a Garden, amenity or disturbance weed |
| 303 | 2007. Randall, R.P Global Compendium of Weeds - Thespesia grandiflora. http://www.hear.org/gcw/species/thespesia_grandiflora/ | No evidence as a weed of agriculture, forestry or horticulture. |
| 304 | 2007. Randall, R.P Global Compendium of Weeds - Thespesia grandiflora. http://www.hear.org/gcw/species/thespesia_grandiflora/ | No evidence as an environmental weed |
| 305 | Thespesia populnea (milo). www.traditionaltree.org | "Milo has the potential to become an invasive weed and should not be introduced into areas where it is not already present. The tree has naturalized in Florida and the Caribbean, where it was introduced as an ornamental. In Florida it is considered a problem weed both in natural areas and in cultivated landscapes. The tree seeds prolifically, and seeds are easily dispersed by ocean currents. It grows in dense thickets that tend to exclude other plants but do not produce trees of a size that would make harvesting attractive. The tree has taken over beaches used by nesting sea turtles in the West Indies." |
| 401 | Thespesia, and Related West Indian Genera of the Malvaceae. Bulletin of the Torrey Botanical Club. 76(2): 89-100. | "Tree to 15 m. tall; young branches stout, lepidote-stellate-pubeseent; stipules linear subulate, 3-4 mm. long, deciduous; leaves orbicular-ovate, 5-25 cm. long (4) 8-19 cm. broad, apex acuminate or acute, base cordate rarely subtruneate, the lobes often overlapping, margin entire to undulate, sparsely lepidote-stellate on both sides when young, especially at the base of the blade; palmately 5-7-nerved; petioles 3-18 cm. long, lepidote-stellate; peduncles 6-25 cm. long, lepidote-stellate," [no spines, thorns or burrs] |

| 504 | 1949. Howard, R.A Atkinsia Gen. Nov., Thespesia, and Related West Indian Genera of the Malvaceae. Bulletin of the Torrey Botanical Club. 76(2): 89-100. | "Tree to 15 m. tall;" |

| 601 | 2000. Liogier, A.H./ Martorell, L.F Flora of Puerto Rico and adjacent islands: a systematic synopsis. Second Edition Revised. La Editorial, UPR, San Juan, Puerto Rico | No evidence of substantial reproductive failure in native habitat |
|-----|---|---|
| 602 | 1949. Howard, R.A Atkinsia Gen. Nov., Thespesia, and Related West Indian Genera of the Malvaceae. Bulletin of the Torrey Botanical Club. 76(2): 89-100. | "seeds 3-5 in each locule, obovoid, 1.2-1.3 cm. long, 7-9 mm. broad, glabrous, black, cotyledons black dotted" |
| 603 | 2010. WRA Specialist. Personal Communication. | Ability to hybridize unknown |
| 604 | 2005. Sambamurty, A.V.S.S Taxonomy of Angiosperms. I. K. International Pvt Ltd, New Delhi, India | "In Thespesia, honey-guides are present at the base of the corolla. Self-pollination is prevented by protrandry." [genus description] |
| 605 | 1949. Howard, R.A Atkinsia Gen. Nov., Thespesia, and Related West Indian Genera of the Malvaceae. Bulletin of the Torrey Botanical Club. 76(2): 89-100. | "in flower, truncate at the apex, minutely lepidote- stellate outside, densely long tomentose inside, the hairs usually clustered; petals obliquely triangular-obovate, 7-11 cm. long, 5-7.5 cm. broad, deep rose shading to crimson inside, orange or tan outside, with black dots or lines along the veins in the center of the petal, densely lepidote-stellate to tomentose outside, glabrous inside; staminal column 4.5-7 cm. long, shorter to rarely equaling the petals, column irregularly dentate at the apex, filaments 2-4 mm. long, usually in pairs and arranged in 5 vertical rows; ovary sessile, ovate to conical, glabrous, 5-loculed, ovules about 5 in each locule" [pollinators unknown] |
| 506 | 1989. Francis, J.K Thespesia grandiflora (DC.) Urban, maga Res. Note SO-ITF-SM-21.: .USDA Forest Service, Southern Forest Experiment Station., New Orleans, LA | Propagation by seed [no evidence of reproduction by vegetative fragmentation] |
| 507 | 1989. Francis, J.K Thespesia grandiflora (DC.) Urban, maga Res. Note SO-ITF-SM-21.: .USDA Forest Service, Southern Forest Experiment Station., New Orleans, LA | "Open-grown maga are reported to begin flowering when5 to 10 years old (Francis 1989)" |
| 701 | 1949. Howard, R.A Atkinsia Gen. Nov., Thespesia, and Related West Indian Genera of the Malvaceae. Bulletin of the Torrey Botanical Club. 76(2): 89-100. | "seeds 3-5 in each locule, obovoid, 1.2-1.3 cm. long, 7-9 mm. broad, glabrous, black, cotyledons black dotted" [no evidence of unintentional dispersal, and seeds without any means of external attachment] |
| 702 | 2000. Liogier, A.H./ Martorell, L.F Flora of Puerto Rico and adjacent islands: a systematic synopsis. Second Edition Revised. La Editorial, UPR, San Juan, Puerto Rico | "sometimes planted for shade and as an ornamental; endemic; introduced elsewhere as an ornamental." |
| 703 | 1949. Howard, R.A Atkinsia Gen. Nov., Thespesia, and Related West Indian Genera of the Malvaceae. Bulletin of the Torrey Botanical Club. 76(2): 89-100. | "seeds 3-5 in each locule, obovoid, 1.2-1.3 cm. long, 7-9 mm. broad, glabrous, black, cotyledons black dotted" [no evidence that seeds contaminate produce, unlikely as seeds are fairly large] |
| 04 | 1949. Howard, R.A Atkinsia Gen. Nov., Thespesia, and Related West Indian Genera of the Malvaceae. Bulletin of the Torrey Botanical Club. 76(2): 89-100. | "capsule ovoid, 3-5 cm. diameter, apparently fleshy when fresh be- coming woody when dry, walls thick; seeds 3-5 in each locule, obovoid, 1.2-1.3 cm. long, 7-9 mm. broad, glabrous, black, cotyledons black dotted." [no adaptations for wind dispersal] |
| 05 | 1949. Howard, R.A Atkinsia Gen. Nov., Thespesia, and Related West Indian Genera of the Malvaceae. Bulletin of the Torrey Botanical Club. 76(2): 89-100. | "capsule ovoid, 3-5 cm. diameter, apparently fleshy when fresh be- coming woody when dry, walls thick; seeds 3-5 in each locule, obovoid, 1.2-1.3 cm. long, 7-9 mm. broad, glabrous, black, cotyledons black dottedThe plants are native in Puerto Rico growing in woods and on hillsides away from the coast." [distribution suggests seeds are not dispersed by water] |
| 705 | 2009. van der Valk, A. (ed.). Forest Ecology: Recent Advances in Plant Ecology. Springer, New York, NY | "Appendix AThespesia grandifloraMode of dispersal = gravity" |
| 706 | 1989. Francis, J.K Thespesia grandiflora (DC.) Urban, maga Res. Note SO-ITF-SM-21.: .USDA Forest Service, Southern Forest Experiment Station., New Orleans, LA | "Maga depends upon fruit bats and birds for dispersal" |
| 706 | 2010. Abelleira Martinez, O.J Invasion by native tree species prevents biotic homogenization in novel forests of Puerto Rico. Plant Ecology. 211: 49–64. | "Seeds and juvenile trees of A. inermis, Calophyllum calaba, Meliococcus bijugatus, Terminalia catappa, Thespesia grandiflora, and Syzygium jambos were usually found in clumps on the ground and far from parent trees. These were probably dropped by roosting common fruit bats (Artibeus jamaicensis) which disperse some of these species locally (Rodri´guez-Dura´n 2005)." |

| 707 | 1949. Howard, R.A Atkinsia Gen. Nov., Thespesia, and Related West Indian Genera of the Malvaceae. Bulletin of the Torrey Botanical Club. 76(2): 89-100. | "capsule ovoid, 3-5 cm. diameter, apparently fleshy when fresh be-coming woody when dry, walls thick; seeds 3-5 in each locule, obovoid, 1.2-1.3 cm. long, 7-9 mm. broad, glabrous, black, cotyledons black dotted." [fruits and seeds without any means of external attachment, no evidence of external animal dispersal] |
|-----|---|---|
| 708 | 1989. Francis, J.K Thespesia grandiflora (DC.) Urban, maga Res. Note SO-ITF-SM-21.: .USDA Forest Service, Southern Forest Experiment Station., New Orleans, LA | "Maga depends upon fruit bats and birds for dispersalBecause bats and birds drop the seeds as they consume the fruits, seeds can be collected from the ground under bearing trees or beneath nearby perch trees." [adapted for bird and bat dispersal, so some seeds probably survive passage through gut] |
| 801 | 1949. Howard, R.A Atkinsia Gen. Nov., Thespesia, and Related West Indian Genera of the Malvaceae. Bulletin of the Torrey Botanical Club. 76(2): 89-100. | "5-loculed, ovules about 5 in each locule; capsule ovoid, 3-5 cm. diameter, apparently fleshy when fresh be- coming woody when dry, walls thick; seeds 3-5 in each locule, obovoid, 1.2-1.3 cm. long, 7-9 mm. broad, glabrous, black, cotyledons black dotted." [fairly large fruits & seeds] |
| 802 | 1989. Francis, J.K Thespesia grandiflora (DC.) Urban, maga Res. Note SO-ITF-SM-21.: .USDA Forest Service, Southern Forest Experiment Station., New Orleans, LA | "The seeds of maga are highly recalcitrant. The folded cotyledons (figure 2) are active and turn green within the seed as germination begins. The seeds begin germinating 5 to 7 days after the fruit ripens (Francis 1989). Many of the seeds picked up from the ground, either loose or within rotting fruits, already have the radicle exposed. It is best to place moist paper towels or other moistened material in the collection container and sow the seeds as soon as possible. Viability of maga seeds can be extended to nearly 4 months by drying to 62.5% moisture and storing at 2 to 4 EC (Marrero 1942)." |
| 803 | 2010. WRA Specialist. Personal Communication. | Unknown [no information on control with herbicides] |
| 804 | 2010. Sagebud. Maga (Thespesia Grandiflora). http://www.sagebud.com/maga-thespesia-grandiflora/ | Coppice Potential: No; Resprout Ability: No |
| 805 | 2010. WRA Specialist. Personal Communication. | Unknown [no information found on natural enemies] |
